# PSLC-L

# PNEUMATIC SHAFT LOCKING CLAMPS

## R⇔₩S

## IMAO

Part Number		d			۱۸/	ц	м	ц.	р	Weight	Suitable shaft dia.
Low Pressure Type	Standard Type	a	L1	L	vv	п	IVI		P	(g)	(h11)
PSLC08-3L	PSLC08-5L	8	14	35	55	35	M5	29.5	35	220	φ8
PSLC10-3L	PSLC10-5L	10									φ 10
PSLC12-3L	PSLC12-5L	12								210	φ 12
PSLC16-3L	PSLC16-5L	16	15	40	63	40	M6	33.5	45	300	φ 16
PSLC20-3L	PSLC20-5L	20								290	φ 20

#### Feature

- Spring clamping and pneumatic unclamping mechanism prevents the decrease of clamping force by air leakage.
- $\cdot \mbox{Available}$  for remote and multiple operations.
- ·Perfect for use in limited space.
- •PSLC-3L type can be used with 0.3 MPa air pressure.

#### 🖌 Note

- •Clamping/unclamping operations must be performed with the shaft not in motion. Cannot be used as a brake of a moving shaft.
- ·Do not force the clamped shaft to move.
- ·Do not operate frequently without the shaft.
- ·Manual unclamping is not possible.
- •Use clean air by removing moisture and debris with an air dryer and air filter.
- ·Impurities in the compressed air can cause malfunction.
- The  $\phi$  3 identification mark is used to distinguish PSLC-3L from PSLC-5L.

#### **Technical Information**

Part Number	Operating Air Pressure (MPa)	Holding Torque (N·m)	Sliding Load (N)		
PSLC08-3L		0.2	50		
PSLC10-3L		0.3	60		
PSLC12-3L	0.3~0.7	0.4			
PSLC16-3L		0.7	00		
PSLC20-3L		0.9	00		
PSLC08-5L		0.4	90		
PSLC10-5L		0.5	100		
PSLC12-5L	0.5~0.7	0.6	100		
PSLC16-5L		1.2	140		
PSLC20-5L		1.5	140		

#### **Application Example**

- ·Three-way valves are recommended.
- •When air is supplied to compress the spring, the shaft is unclamped. When air is released, the shaft is clamped by the spring.

·Use bushings or bearings with the unit as needed.

### Sliding shaft locking

Lock for position adjustment

#### Sliding shaft locking

Slip prevention from backlash of linear slides
